

CRITICAL REVIEW
of the educational and scientific program
for the third higher educational and scientific level
in specialty 025 "Musical Art".

Kharkiv State Academy of Culture

Educational and scientific program of the third higher educational and scientific level in specialty 025 "Musical Art" is aimed at providing scientific training for researchers in the field of music. The program provides for the successful implementation of the topic of the scientific research, creates conditions for the development of scientific thinking of applicants, research competence and self-realization of graduate students, and stimulates the development of new innovative ideas and projects.

The educational-scientific program is capable of providing high quality training of scientific personnel, music experts, teachers of music and art disciplines based on obtaining scientific and pedagogical practice and developing a system of internal self-organization in research work.

Mandatory components of the educational and scientific program include a number of disciplines divided into two cycles: compulsory and elective ones, aimed at the formation of general and professional competencies. The postgraduate training program is focused on independent research in the field of art history and musicology.

In general, the educational and scientific program of the third higher educational and scientific level of education in specialty 025 "Musical Art" of Kharkiv State Academy of Culture is relevant, meets educational and qualification requirements for doctors of philosophy, and, as a result, provides quality training of future scientists.
